

Summit Point Logistics Park - Environmental and Infrastructure Memo

Prepared June 2026 | Consultant memorandum

Environmental Reserve

The Phase I environmental review identified historical light-industrial use on Parcel C. The consultant recommends an environmental remediation reserve of \$6,500,000 for soil management, vapor mitigation, and stormwater controls. The reserve is included in the construction budget as Environmental / PFAS reserve.

No additional reserve is recommended beyond the \$6,500,000 line item unless sampling confirms groundwater migration.

Infrastructure / Utility Risk

Power delivery for the cold-storage component depends on completion of the utility substation upgrade. The utility has issued an estimated completion window of Q3 2028. The municipality also requires public road widening, signalization, and stormwater detention improvements. The current offsite/public improvement allowance is \$9,000,000.

Key Values

Item	Amount / Timing
Environmental remediation reserve	\$6,500,000
Public/offsite improvements	\$9,000,000
Utility substation completion	Q3 2028
Potential schedule delay reserve	\$4,000,000
