

Summit Point Logistics Park - Sponsor Investment Summary

Prepared June 2026 | Confidential draft

Project Overview

Summit Point Logistics Park is a four-building industrial and logistics development planned for the I-85 logistics corridor outside Charlotte, North Carolina. The project is designed to include dry warehouse, cold storage, and last-mile flex space.

The sponsor describes the program as 1,240,000 rentable square feet across four buildings. The business plan assumes phased delivery over 24 months with stabilization by month 30. The sponsor's base case assumes total development cost of \$334,000,000 and senior construction debt of \$200,400,000.

The sponsor states that common equity of \$133,600,000 has been committed by the sponsor and joint venture partner.

Sponsor Base-Case Assumptions

Assumption	Sponsor Case
Total development cost	\$334,000,000
Senior construction debt	\$200,400,000
Common equity commitment	\$133,600,000
Exit cap rate	5.25%
Operating expense ratio	24.00%
Hold period	5 years
Lease-up period	30 months
Stabilized occupancy	95.00%
Other income	\$1,400,000 annually

Investment Thesis

The sponsor believes Summit Point benefits from strong logistics demand, direct interstate access, and a differentiated cold-storage component. The dry warehouse component is expected to capture regional distribution demand. The cold storage building is expected to command a rent premium versus conventional warehouse space.

The sponsor highlights 96% pre-leasing across the planned program. However, approximately 64% of gross rental revenue is tied to a single anchor tenant, Horizon Commerce, under a lease with an early termination option after year 6 subject to a termination fee.

Known Sponsor-Identified Risks

1. Tenant concentration: Horizon Commerce represents the majority of projected revenue.
2. Specialized cold-storage improvements could be costly to re-tenant.
3. Cap rates for large-format logistics assets have widened during the past two quarters.
4. Power-delivery timing remains subject to utility upgrade completion.
